KIRKLEES BUSINESS NEWS

Agency on the superhighway

A **TRAFFIC** and highways engineering consultancy has invested **more** than £50,000 to install a new computer system to guard against breakdown, fraud and fire.

Sanderson Associates, based at Grange Moor has introduced the system to **take full** advantage of the opportunities presented as the country moves out of recession.

Managing director Alison France (pictured, right) said: "We **decided** it was time to replace the company's existing servers and IT system.

"Our new system comprises **three** physical servers and a new data storage unit.

"Two of the physical servers are located on-site along with the data storage unit, the third physical server is located off-site and is utilised as a full back up system."

Said Alison: "Thousands of emails are received by the company every day, so the recording of inbound and outbound information as well as work undertaken is critical for us to continue moving forward positively."

The company has also introduced a new time-recording system, CoreTime from Sage, which has been incorporated into the company's own system and relates to each scheme or development proposal Sanderson Associates are working on.
